

Your trusted advisor on the journey to a sustainable future

At Genesis, we bring deep experience in upstream SURF (Subsea Umbilicals, Risers and Flowlines), along with offshore and onshore pipeline engineering, spanning the full project lifecycle. We are committed to delivering value through intelligent decision-making, strong investment support, and close collaboration to identify and implement cost-effective solutions that derisk project delivery.

PARTNERING FOR PROJECT EXCELLENCE

By actively listening and working closely with our clients, we deliver optimized solutions that truly meet their needs. Our subsea and pipeline experts can operate independently as part of project teams or as owner's engineers. We also have principle-based engineering, project delivery and commercial experience. With an established track record across shallow water, deepwater and ultra-deepwater developments, Genesis can serve as a trusted partner and advisor – from concept through commissioning and into operation.

If you're interested in learning more about our services and how we can help you, get in touch today.

Our SURF and Pipeline Capabilities

We support clients across the full value chain with services including:

PROJECT SUPPORT

- Field Development Planning (Assessment and Concept Selection)
- Detailed Engineering (Thermomechanical Analysis, FEA, Modelling)
- Owners Engineering (SURF and Pipeline)
- Commissioning and Start-up
- Integrity Management
- Life Extension
- Decommissioning

OPERATIONAL SUPPORT

- Integrity Management
- Life Extension
- Technical Reviews

TECHNICAL ENGINEERING

- Subsea Controls Systems
- Subsea Production Systems
- Deepwater Flowlines and Pipelines
- High-Pressure, High-Temperature (HTHP)
- Flow Assurance
- Cost Estimating
- Riser and Mooring
- Umbilical Design
- Due Diligence
- Subsea Structures
- Geotechnical
- Shallow Water Pipelines
- Shore Crossings
- Onshore Pipelines
- Integration with Topsides and Surface Facilities
